Global Thermostat (52') – Fall 2018 – 4K & HD

Films En Vrac / Directed by Arthur Rifflet

Broadcasters: Ushuaïa TV

Given the pressure of the global warming, geo engineering, or the modification of the earth's climate on a large scale, is no longer just science fiction. Capturing the CO2 that forests of artificial trees release into the atmosphere, reflecting the sun's light by creating a shield in the mesosphere... Scientists are testing new technologies that, according to them, will be able to limit the effects of global warming or even global cooling. What are the processes? How do they work? Is this really already possible? And how can these solutions be tested? They are sometimes tested in laboratories, but how can we be sure they'll work on a large scale? What are the risks for the earth?
